

OFFICE SUPPLIES: EASY PRODUCT DATA MANAGEMENT FOR GS1net

Your product data not on the GS1net datapool? Bizcaps can get you there right now!

The GS1net datapool is intended to be the single source of product data for buyers in the office supplies market place – as it is with grocery and other FMCG, liquor, healthcare, automotive aftercare and hardware markets.

B2B access to many key trading partners requires industry suppliers to publish their product data in GS1net and keep it updated. In future, access to a datapool is likely to be a condition of doing business with many important trading partners and retailers.

Trusted by leading brands including ACCO, Avery Dennison, Energizer, Pentel and Staedtler.

Bizcaps Enterprise software is all you need to validate, maintain and publish your product data to GS1net and other datapools.

GET A HEAD START WITH BIZCAPS

Bizcaps Enterprise is designed to help you increase your supply chain efficiency by creating and maintaining product data for GS1net, validated against your industry and business rules and in the format that your trading partners need.

Enterprise allows you to:

- quickly validate, create and publish your product data on GS1net,
- efficiently maintain and update your product data on GS1net
- link your product catalogue to existing ERP and other internal systems
- publish product data to other major product datapools.

Enterprise also has powerful workflow capabilities that will let you streamline and manage your product data collection and publication processes.

Enterprise is powered by the Bizcaps GS1net Connect engine, the first middleware to be certified for use with GS1net. Changes to the requirements of GS1net will be automatically provided to you as part of Bizcaps maintenance commitment.

Enterprise is part of a range of Master Data Management and Business Process Management software available from Bizcaps.

WHY BIZCAPS?

Not only was Bizcaps the first middleware certified for GS1net, but it is certified for use in all GS1net industry sectors. As an Alliance partner of GS1, Bizcaps is uniquely qualified to help suppliers extract maximum value from their participation in GS1net.

Bizcaps Enterprise has been built to facilitate use of the GS1net (and other) datapools with:

- a comprehensive product catalogue available for reference and marketing purposes, including upload to GS1net, NPC and other buyer datapools
- browser-based operation and no separate connection costs
- installation in-house or hosted, providing Internet access for use anywhere, anytime
- single click upload of validated data to the GS1net datapools, powered by the GS1 certified "GS1net Connect Engine"
- automatic generation of field contents based on business rules or standards
- powerful data import and export functionality
- built in validation rules based on industry standards and business requirements
- guaranteed data compliance with GS1net rules, validated as data is entered
- customisable data collection workflows and powerful optional workflow management extensions
- product data change audit reports
- comprehensive integration functionality and tools for interface with ERP and other systems
- simple, user friendly and intuitive interface containing familiar, industry-standard fields
- context sensitive help
- award-winning support
- maintenance which includes automatic updating of changes to GS1net rules.

Bizcaps created and maintains the product data catalogues of some of the largest organisations in Australia. Bizcaps also develops a range of Business Process Management software tools that automate key processes to get products to market faster and more profitably.

Bizcaps is an Australian private company with international distributors and experience with offshore implementations, where we are committed to expansion. The Bizcaps management team has many years' experience in industries such as office supplies, FMCG, pharmaceuticals, food and beverage, retail, warehousing and distribution.

GS1net: ALL YOU NEED TO KNOW

GS1net is GS1 Australia's data synchronisation solution for the Australian and New Zealand markets. GS1net lets you enter, validate, store and maintain all your product, pricing and other related trade information in a single location.

With GS1net you can easily share global standards-based information with the trading partners you work with, across all industry sectors, both in Australia and around the world.

With GS1net you can:

- maintain a single source of product data, available to all in-house systems
- reduce order and invoice errors and slash invoice claims
- reduce out-of-stock products
- reduce the time to market for new products
- improve product management and product recalls
- improve product authentication with the ability to track and trace products
- reduce storage and transport costs
- ensure and maintain data integrity.
